

Elementary evolutionary events

Local configuration edges describe supported structural changes

A Split

Before 

After 

One separator; DNA retained

B Fusion

Before 

After 

Intervening DNA retained

C Endpoint shift

Before 

After 

One supported endpoint shifts

D Exonization

Before 

After 

Candidate exon; DNA retained

E Exon inactivation

Before 

After 

DNA retained

F DNA insertion

Before 

After 

Material m: absent $\rightarrow$ present

G One continuous deletion affects coexisting configurations

Before

C₁

C₂

same tract

After

C₁'

C₂'

One DNA event

Distinct residual configurations
